2008 Lewis & Clark County
Traffic Count Program Update Summary

In June 2008 Abelin Traffic Services contracted with Lewis & Clark County to perform traffic counts for the County's Traffic Count Program. The Traffic Count Program is an important tool for engineers and planners to help determine growth characteristics within the county and determine where maintenance funds should be spent. Abelin Traffic Services (ATS) previously oversaw the 2006 and 2007 Traffic Counting Program.

The goal of the 2008 counting program was to update all of the previous year's traffic data and collect additional one-time traffic counts on most of the other County maintained roadways to help with future road maintenance planning. The County supplied ATS with a list of all of roadways which are currently maintained by Lewis & Clark County. Using the County's GIS mapping information, representative locations along each of the County roadways was selected for study. The list of new count locations was added to the existing "Special" count sites and scheduled for data collection.

In all 83 additional count sites were developed for the 2008 traffic counting season along with the existing 101 special count site, 145 regular sites, and 20 MDT sites for a total of 349 count locations. Traffic count data for these locations was collected between the months of June and November 2008. No traffic count data was collected on weekends or holidays.

The raw data collected within Lewis & Clark County during the 2008 traffic counting season was then factored to an Annual Average Daily Traffic (AADT) volume by using the MDT Portable Vehicle Combo Count Factors. These monthly traffic factors are available from MDT each year for different classifications of roadways based on MDT's historic traffic volume information. The data provides a monthly factor which is used to determine an accurate AADT traffic volume no matter which month the counts were performed. The monthly count factors used for 2008 are included with this report.

The original goal for the project was to count all 349 count locations which are the responsibility of the County during the 2008 count season. Time constraints near the end of the counting season required a change in the scheduled counts so that any of the remaining "special" count sites which were counted previously in 2007 were not recounted in 2008. This included ten of the original "special" count locations. Upon final inspection of the final traffic count data, two of the "special" count locations studied in 2008 contained data errors significant enough to make the counts invalid. These counts included Cutlip Road (SP 55) and Canal Circle (SP 89).

The contract agreed upon for this project was an hourly cost for the engineer and field technician plus direct expenses not to exceed $30,000 for as many sites as could be completed. ATS collected traffic data at 301 total locations at a cost of $99 per site. After the traffic data was collected the raw hourly data was exported for each site. This data was then transferred into a Microsoft Excel worksheet and factored to produce

AADT traffic volumes for each location. The factored data was then assembled into a book with the same format as was used on the traffic booklets created for the 2006 and 2007 traffic counts.

The data collected by ATS indicates a 3% overall decrease in traffic volumes from 2007 to 2008. MDT was contacted to determine if this result was in-line with what was being observed elsewhere in the State. MDT staff indicated that almost all their permanent traffic counters were indicated a small decrease in traffic volumes from 2007 to 2008 which was attributed to high fuel prices. The results of the Lewis & Clark County traffic data counts are in line with the overall statewide trends for 2008.

The following is a summary of where most of the traffic growth has occurred within the Helena Valley. These major roadways (+300 VPD) had greater than 8% traffic growth between 2007 and 2008.

- **Beartooth Rd** (5-13) ADT 435. Traffic volumes south of the Frontage Road have increased 110% since 2007. However, this is within the normal range of variation for recreational roads and is in line with historic averages.

- **Prairie Road** (7A-40) ADT 623. Traffic volumes west of Montana Avenue have increased 9%.

- **Valley View Road** (7A-44) ADT 534. West of Montana Avenue traffic volumes have increased 56% since 2007.

- **Applegate Drive** (7A-51) ADT 565. South of John G. Mine Road traffic volumes have increased 9%.

- **John G. Mine Road** (7A-57 & 58) ADT 571 & 619. West of Applegate Drive traffic volumes have increased 12% and East of Green Meadow Drive traffic volumes have increased 13%.

- **Norris Road** (7A-60) ADT 601. East of Green Meadow Drive traffic volumes increased 24%, but are in line with historic averages.

- **Lake Helena Drive** (7A-68 & 69) ADT 1,285 & 1,667. South of York Road traffic volumes have increased 8%. North of Canyon Ferry Road traffic volumes have increased 10%. These volumes are in line with historic averages.

- **Remington Street** (7A-85) ADT 1,337. East of Lake Helena Drive traffic volumes increased 9% from 2007, but are in line with historic averages.

- **Forestvale Road** (7B-47) ADT 1,475. West of McHugh Drive the traffic volumes increased 141% from 2007.

- **Wylie Drive** (7B-65) ADT 5,630. East of the Helena City Limits the traffic volumes increased 23% from 2007.
